

Chill Food Waste Management Solution

Introduction

Chill is a tablet and mobile based Food Waste Management solution designed to allow hotels, restaurants, and commercial kitchens to classify, measure and analyse their food waste.

Using touch navigation and entry of weights, Chill provides a simple yet powerful tool to combat the global problem of food waste in the food service industry.

Chill can be tailored to the needs of food businesses through a flexible navigation hierarchy that can be structured to suit individual requirements.

Using a hierarchy based on Outlet, Shift, Food Type and Food Item, Chill can be tailored to accurately reflect a restaurant's preparation, meal types and menu items.

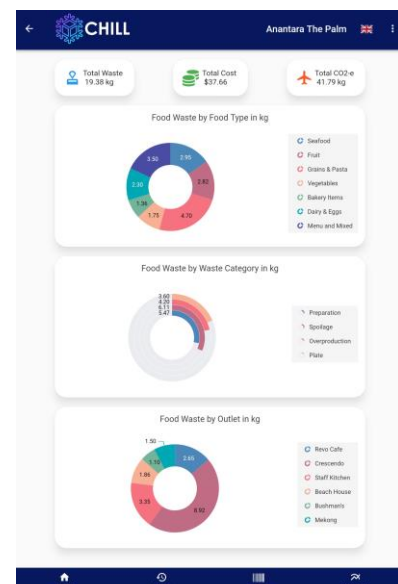

Reporting & Analysis

Once recorded, all food waste readings can be accessed through local and global reporting from outlet/shift level through to enterprise-wide aggregation.

This includes analysis dashboards and detailed reports with export to Excel.

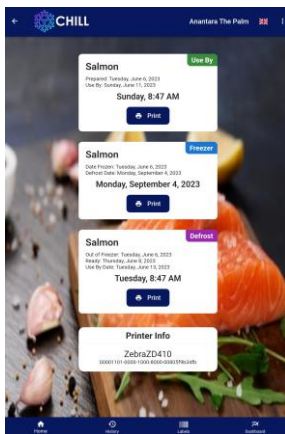

A detailed 7-day dashboard is available in the app, with more granular reporting and analysis available through the web-based data studio interface.

The reporting functions within the Chill solution directly address the food waste requirements of the internationally recognised ESG & CSR reporting initiatives in relation to consumption, disposal, cost, and CO2-e emissions. These include the FLW Protocol, CDP, SDG 12.3, and ISO14001.

Chill supports a range of android tablets and is available in English, Spanish, French & Thai.

A food labelling module is also included in the Chill.

This allows users to produce Use-By, Freezer and Defrost labels for all of the food prepared within the kitchen. The correct usage dates are stored within the system eliminating the need to remember dates or manually refer to use by tables for each item.

The module uses a Bluetooth connected thermal printer to produce detailed labels.

Pricing Schedule

Chill Food Waste App

The Chill Food Waste Management solution is priced monthly, based on a minimum 24-month agreement. This provides up to 4 recording outlets (restaurants/kitchens) with unlimited recording devices (tablets/phones).

The Chill License also includes an automatic “Weekly Insights” report for each outlet and a consolidated report of the overall system. A remote zoom call to review quarterly performance a one-day onsite annual waste food waste audit is also included in the monthly license fee.

Consulting Services

The Chill team will conduct a two-day workshop as part of the Chill implementation. This workshop may be conducted onsite or as part of a cluster implementation at a specific location. The workshop will be available to an unlimited number of users (with their own hardware) and be billed per Chill site installation.

The workshop will cover general concepts around food waste, baseline analysis and implementation and training in the Chill solution.

- Food Waste concepts
- Reduction strategies
- Analysis of waste streams and recording locations
- Establish food waste baseline – food waste per day and F&B cover
- Configuration of the Chill solution – outlets, food items
- Chill app training
- Food labelling module
- Reporting and analysis
- System handover

An additional day of consulting offsite is also included for project initiation, system set-up and data upload.
